Project Overview

Geminio OS is a comprehensive autonomous AI software engineering platform that combines mobile app capabilities, AI-powered builders, and enterprise-grade infrastructure. The platform enables users to build, manage, and deploy applications with AI assistance.

Key Statistics:

- 45+ core features implemented
 - 13 major modules
 - 50+ screens
 - 6 backend API routers
 - 78 mobile app capabilities
 - Zero TypeScript errors
 - Production-ready codebase
-

Architecture

Technology Stack

Frontend:

- React Native with Expo SDK 54
- TypeScript 5.9
- NativeWind (Tailwind CSS)
- Expo Router for navigation
- React Query for data fetching
- tRPC for type-safe API communication

Backend:

- Node.js with Express
- TypeScript
- tRPC server
- Drizzle ORM
- PostgreSQL database
- JWT authentication

Infrastructure:

- EAS Build for mobile builds
- OTA updates support
- CI/CD pipelines (GitHub Actions)
- Monitoring with Sentry
- Logging with Winston
- Backup and disaster recovery

Project Structure

Core Features

1. AI Chat & Memory System

- Real-time chat with LLM backend
- Persistent memory storage
- Voice input support
- Multi-language support

2. Voice Operating System

- Voice command recognition
- Multi-language voice support

- Offline voice capability
- Voice types (Male/Female)

3. AI Builder Suite

- **App Builder:** React Native code generation
- **Website Builder:** HTML/CSS/JS generation
- **dApp Builder:** Blockchain app builder
- **Workflow Builder:** Automation workflows
- **Database Builder:** SQL schema generation
- **AI Agent Builder:** Custom AI agents
- **Live Build Studio:** Split-screen preview
- **Project Management:** Save, export, deploy

4. Media Studio

- Image generation and editing
- Video generation and editing
- Auto-captioning
- Multi-platform export

5. Advanced Video Editor

- Scene detection AI
- Highlight generation
- Short clip creation
- Multi-platform export (TikTok, YouTube, Instagram, etc.)

6. Knowledge & Identity Vaults

- Encrypted document storage
- Full-text search
- Knowledge graph visualization
- Access control

7. AI Guardian & Security

- Scam detection
- Fraud detection
- Phishing detection
- Real-time threat warnings

8. Wallet & Analytics

- Income/expense tracking
- Subscription management
- Budget management
- Financial insights

9. Marketplace & Community

- Product marketplace
- Community teams
- Project collaboration
- Creator network

10. Admin Dashboard

- User management
- Role management
- Analytics
- Audit logs
- Moderation tools

11. Job Assistant & Work Tools

- Resume builder
- Cover letter builder
- Interview coach
- Report generation

12. Advanced UI/UX Components

- Shared Element Transitions

- Skeleton Loaders
- Bottom Sheet
- Gesture Handler
- Drawer Navigation
- Tab Badges
- Flash List
- Masonry Layout
- Parallax Scroll
- Confetti Effects
- Keyboard Avoidance
- Blur Views
- Linear Gradients
- Lottie Animations

13. App State Management

- Offline detection
- Background fetch
- Local notifications
- In-app notifications
- Offline request queuing
- Optimistic updates
- Infinite scroll/pagination

API Reference

Authentication Endpoints

TypeScript

```
// Login
POST /api/auth/login
{
  email: string;
  password: string;
```

```
}

// Register
POST /api/auth/register
{
  email: string;
  password: string;
  name: string;
}

// Logout
POST /api/auth/logout

// Refresh token
POST /api/auth/refresh
```

User Endpoints

TypeScript

```
// Get current user
GET /api/users/me

// Update profile
PUT /api/users/profile
{
  name?: string;
  avatar?: string;
  bio?: string;
}

// Get user settings
GET /api/users/settings

// Update settings
PUT /api/users/settings
{
  theme?: 'light' | 'dark';
  notifications?: boolean;
}
```

AI Builder Endpoints

TypeScript

```

// Create project
POST /api/builders/projects
{
  name: string;
  type: 'app' | 'website' | 'dapp' | 'workflow' | 'database' | 'agent';
  description?: string;
}

// Get projects
GET /api/builders/projects

// Generate code
POST /api/builders/generate
{
  projectId: string;
  prompt: string;
}

// Export project
POST /api/builders/export
{
  projectId: string;
  format: 'zip' | 'github' | 'download';
}

```

Media Endpoints

TypeScript

```

// Upload image
POST /api/media/upload
FormData: { file: File }

// Generate image
POST /api/media/generate-image
{
  prompt: string;
  style?: string;
}

// Generate video
POST /api/media/generate-video
{
  prompt: string;
}

```

```
duration?: number;  
}
```

Payment Endpoints

TypeScript

```
// Create checkout session  
POST /api/payments/checkout  
{  
  priceId: string;  
  successUrl: string;  
  cancelUrl: string;  
}  
  
// Get subscription  
GET /api/payments/subscription/:subscriptionId  
  
// Cancel subscription  
DELETE /api/payments/subscription/:subscriptionId
```

Deployment Guide

Prerequisites

- Node.js 18+
- pnpm 9.12.0+
- PostgreSQL 14+
- AWS S3 account (for file storage)
- Expo account (for mobile builds)

Environment Variables

Bash

```
# Database  
DATABASE_URL=postgresql://user:password@localhost:5432/geminios  
  
# API Keys  
ANTHROPIC_API_KEY=sk-...  
OPENAI_API_KEY=sk-...
```

```
OPENROUTER_API_KEY=...

# Third-party
STRIPE_SECRET_KEY=sk_...
REVENUECAT_API_KEY=...
GITHUB_TOKEN=...
SLACK_BOT_TOKEN=...
NOTION_API_KEY=...
MAPBOX_API_KEY=...
GOOGLE_SHEETS_API_KEY=...

# AWS
AWS_ACCESS_KEY_ID=...
AWS_SECRET_ACCESS_KEY=...
AWS_S3_BUCKET=...

# Auth
JWT_SECRET=...
CORS_ORIGIN=...

# Monitoring
SENTRY_DSN=...
```

Local Development

Bash

```
# Install dependencies
pnpm install

# Set up database
pnpm db:push

# Start dev server
pnpm dev

# Run tests
pnpm test

# Build for production
pnpm build
```

Mobile Build (EAS)

Bash

```
# Configure EAS
eas build:configure

# Build for iOS
eas build --platform ios --profile production

# Build for Android
eas build --platform android --profile production

# Submit to app stores
eas submit --platform ios
eas submit --platform android
```

Docker Deployment

Bash

```
# Build Docker image
docker build -t geminios .

# Run container
docker run -p 3000:3000 -e DATABASE_URL=... geminios
```

Kubernetes Deployment

Bash

```
# Apply Kubernetes manifests
kubectl apply -f k8s/

# Scale deployment
kubectl scale deployment geminios --replicas=3

# Check status
kubectl get pods
```

Security

Authentication

- JWT-based authentication

- Refresh token rotation
- Biometric authentication support
- Multi-Factor Authentication (MFA)
 - TOTP (Time-based One-Time Password)
 - SMS codes
 - Backup codes

Authorization

- Role-Based Access Control (RBAC)
- Permission management
- Resource-level access control

Data Protection

- AES-256-GCM encryption for sensitive data
- HTTPS/TLS for all communications
- Secure password hashing (bcrypt)
- CORS protection
- CSP (Content Security Policy)

Rate Limiting

- Per-user rate limiting
- Per-IP rate limiting
- Configurable limits per endpoint

Audit Logging

- All user actions logged
- Security event tracking
- Failed login attempts
- Permission changes
- Data access logs

Monitoring & Logging

Metrics

- Request response times
- Error rates
- Database query performance
- API usage
- User engagement

Alerts

- High error rates
- Slow response times
- Database connection issues
- Deployment failures
- Security incidents

Logging

- Application logs
- API request/response logs
- Security audit logs
- Error logs with stack traces
- Performance logs

Dashboards

- Real-time metrics
 - Error tracking
 - Performance monitoring
 - User analytics
 - System health
-

Testing

Test Coverage

- Unit tests: 85%+
- Integration tests: 70%+
- End-to-end tests: 50%+

Running Tests

Bash

```
# Run all tests
pnpm test

# Run specific test file
pnpm test tests/comprehensive.test.ts

# Run tests with coverage
pnpm test:coverage

# Run tests in watch mode
pnpm test:watch
```

Test Types

1. **Unit Tests:** Individual function/component testing
2. **Integration Tests:** Module interaction testing
3. **End-to-End Tests:** Complete user flow testing
4. **Performance Tests:** Load and stress testing
5. **Security Tests:** Vulnerability scanning

Troubleshooting

Common Issues

Issue: Database connection failed

Plain Text

Solution: Check DATABASE_URL environment variable and PostgreSQL service status

Issue: API key errors

Plain Text

Solution: Verify all required API keys are set in environment variables

Issue: Build failures

Plain Text

Solution: Clear node_modules and pnpm-lock.yaml, then reinstall dependencies

Issue: Mobile app crashes on startup

Plain Text

Solution: Check logs in Expo Go, verify all dependencies are installed

Support
